COMPLEX, COLEUS FORSKOHLII AND
CAFFEINE, OZONE PROTECTION
COMPLEX, APRICOT AND BURITI OIL.

+ UVB - UVA SUN FILTERS
(for Sun Cream SPF 6 - 15 - 30)

GUAM® FANGOCREMA SOLE

Exposure to the sun and the heating that follow makes the skin more receptive to the active ingredients.

So, GUAM® Fangocrema Sole is an effective means to combat fatty deposits under the skin and to favour the elimination of water retention while protecting against sun rays.

It is ideal to extend and enhance under the sun the benefits of GUAM® Seaweed Mud and GUAM® Mud-based cream.

GUAM® Fangocrema Sole slims, firms and tones skin tissue.

SLIMMING-TANNING TREATMENT CREAM SPF 15

150ml Tube

GUAM® study and research team proposes GUAM® Fangocrema Sole slimming-tanning treatment. It is formulated to guarantee to all the types of skin the best protection and a long-lasting and homogeneous tan.

The blend of sun filters, ozone protection complex and hydrating agents guards against premature skin ageing, protecting your skin and keeping it soft and supple for longer.

At the same time, the GUAM® Seaweed slimming complex, with Coleus Forskohlii and Caffeine, increases skin tone and firmness.

SUN FILTERS:

Ethylhexyl methoxycinnamate (UV-B filter), butyl methoxydibenzoylmethane (UV-A filter), benzofenone 3 (UV-A and UV-B filters).

METHOD OF USE

Apply to entire body (before exposure to sun), with a light massaging motion until completely adsorbed. Repeat application (several times if necessary), especially after bathing.

ACTIVE INGREDIENTS

SLIMMING COMPLEX WITH GUAM® SEAWEEDS, COLEUS FORSKOHLII AND CAFFEINE:

Caffeine, lipase, and adenosine cyclasi extracted from Coleus Forskohlii stimulate the lipolytic process of the adipocytes contained in the superficial skin layer.

OZONE PROTECTION COMPLEX:

Hydro soluble ingredient with high anti-irritant action. This synergic blend performs a protective action against both aggressive agents as Ozone (o3) and UV radiation. Oxidoreductases are able to defeat free radicals making them harmless while soya's peptides inhibit the most dangerous proteinase. The combination of these actions assures to the skin an effective protection against irritations and premature ageing.

APRICOT OIL:

It is used for tanning treatment because its content in carotene enhances tanning. It is rich in minerals (potassium, phosphors, calcium, magnesium and sodium salts), vitamin A and E.

BURITI OIL:

Rich in unsaturated fatty acids, it is considered an important source of carotenoids and pro-vitamin A. Used in tanning creams because fastens tanning and prevents burning, it leaves skin healthy, improving healing and preventing dryness. Buriti oil is recommended in case of burning.

WARNING

Even when using sun filters, you are advised to avoid the midday sun. Overexposure to the sun can put your health seriously at risk. Repeat application after bathing or excess perspiration.

Keep babies and children away from direct sunlight. Avoid contact with the eyes and do not apply to cuts or irritated skin.
